# Data Collection and Preprocessing Phase

| | |
|---|---|
| Date | 20 June 2026 |
| Student Name | Kedar Santosh Urunkar |
| Project Title | GreenSnap: A Vegetable Classifier |
| Maximum Marks | 2 Marks |

**Data Quality Report Template**

| Data Source | Data Quality Issue | Severity | Resolution Plan |
|---|---|---|---|
| Dataset | Image Variation | High | Collect images from diverse sources (different cameras, lighting conditions, angles). Implement data augmentation techniques (rotation, scaling, cropping) during preprocessing. |
| Dataset | Occlusion | Moderate | Include images with partial occlusion, and/or train the model to be robust to it. |
| Dataset | Insufficient Resolution | Moderate | Establish a minimum resolution threshold for images. Use super-resolution techniques, if feasible, to enhance the resolution of some images. |

| | | | |
|---|---|---|---|
| Dataset | Unbalanced Classes | High | Employ stratified sampling to ensure proportional representation of each mushroom species. Use data augmentation for minority classes. Explore the use of weight loss functions during training. |
